SUMMARY

Aspiring AI/ML Engineer and Data Analyst with strong knowledge of Python, SQL, Machine Learning, and Data Analysis. Experienced in developing AI-powered applications, data-driven solutions, and predictive models. Skilled in NLP, data visualization, and full-stack development. Seeking an opportunity to apply analytical and technical skills to contribute effectively to organizational growth and innovation.

PROFESSIONAL EXPERIENCE

AI Engineer Intern | Webkalakaar Software **March 2026 – Present**

- Developed an AI-powered candidate evaluation and weighted scoring system using LLMs.
- Designed and managed the complete database architecture for interviews, candidate responses, scoring, and analytics.
- Generated AI-driven interview summaries and performance insights for each candidate.
- Implemented secure authentication using Google OAuth, LinkedIn OAuth, and GitHub OAuth.
- Integrated Monaco Editor for coding assessments and real-time code execution.
- Built a configurable question timing management system, allowing interviewers to set and edit time limits for individual questions and interview sections.
- Developed automated result generation based on test case execution and performance metrics.
- Built Fast APIs and integrated AI services to automate interview workflows and improve scalability.

Technologies

Python, FastAPI, OpenAI API, AI/LLM Integration, JWT Authentication, OAuth 2.0, Google OAuth, GitHub OAuth, LinkedIn OAuth, React.js, JavaScript, PostgreSQL, SQLAlchemy, Monaco Editor, REST APIs, Git, GitHub

PROJECTS

AI-Based Resume Classification System

- Developed a Python-based application to scan folders and files, analyze directory structures, and extract file information automatically. Implemented recursive scanning, file categorization, and storage analysis to improve file management and disk usage monitoring.

Customer Churn Prediction System

- Developed a machine learning-based customer churn prediction system to identify customers at risk of leaving a business. Performed data preprocessing, feature engineering, and model training to analyze customer behavior and predict churn accurately.
- Built predictive models and generated actionable insights to support customer retention strategies, helping businesses make data-driven decisions and improve customer loyalty.

TECHNICAL SKILLS

- **Programming:** Python, JavaScript, SQL, React.js, FastAPI
- **AI/ML Concepts:** Machine Learning, Natural Language Processing (NLP), Deep Learning, OpenAI API, LLM Integration
- **Database Engineering & Querying:** PostgreSQL, SQLAlchemy, Database Design, Query Optimization
- **Data Analysis & Processing:** Pandas, NumPy, Scikit-learn, Data Preprocessing, Feature Engineering, Model Evaluation
- **Tools:** Git, GitHub, Postman, Google Colab, VS Code, Vercel

EDUCATION

Master of Computer Application **2024 - 2026**
Vivekananda Global University (VGU), Jaipur Pursuing

Bachelor of Computer Application **2019 - 2023**
Magadh University, Bodh Gaya Percentage: 75%

ADDITIONAL INFORMATION

- **Certifications:** Ultimate Job-Ready AI-Powered Data Analytics Course – **CodeWithHarry** , Foundations: Data, Data, Everywhere – **Google** , AI For Everyone – **DeepLearning.** , Introduction to Artificial Intelligence – **IBM** , Learn AI Agents – **Scrimba**
- **Languages:** English,Hindi
- **Hobbies :** Learn New Things , Cricket , Listening Music
